SUMMARY

Full Stack Developer with hands-on experience designing and developing responsive web applications using **React.js, TypeScript, Node.js, Express.js, Python, PostgreSQL, SQLite, and Reflex**. Experienced in building secure authentication systems, REST API-driven applications, database-backed solutions, and scalable full-stack applications. Strong foundation in Cloud & Infrastructure Engineering with expertise in troubleshooting, cross-functional collaboration, Agile methodologies, and delivering reliable software solutions. Passionate about building user-centric web applications with clean architecture and modern development practices.

TECHNICAL SKILLS

Frontend: • React.js • TypeScript • JavaScript • HTML5 • CSS3 • Tailwind CSS • Vite • Reflex • Flutter • Dart
Backend: • Node.js • Express.js • Python • REST API Development • JWT Authentication • CRUD Operations
Databases: • PostgreSQL • SQLite • Oracle SQL • SQL • Database Design
Cloud & DevOps: • Azure • Docker • Git • GitHub Actions • CI/CD Pipelines • Linux Fundamentals
Tools & Methodologies: • Git • GitHub • VS Code • Jira • Confluence • Agile • Scrum

WORK EXPERIENCE

Engineer – Cloud & Infrastructure Management May 2025 – Present
LTM Ltd, Bangalore, Karnataka

- Diagnosed recurring infrastructure and application issues using Root Cause Analysis (RCA), improving service reliability and operational efficiency.
- Investigated production incidents and collaborated with cross-functional teams to troubleshoot, resolve, and prevent recurring service disruptions.
- Documented technical workflows and operational procedures, improving knowledge sharing and streamlining incident resolution.
- Worked within Agile support processes to maintain service availability while meeting operational SLAs.

Organic Fresh Store Startup
(Client Project - Ilai Foods)

- Designed and developed a responsive full-stack e-commerce web application for an organic products startup using React.js, Vite, Express.js, and SQLite, enabling customers to browse and purchase sprouts, mushrooms, and other organic products.
- Developed secure user and admin authentication using JWT and bcrypt, ensuring protected access to customer and administrative functionalities.
- Built customer-facing features including product catalog browsing, category filtering, flash deals, shopping cart, guest checkout, and customer review submission to deliver an intuitive shopping experience.
- Developed an admin dashboard for managing products, orders, and promotional deals, supporting efficient catalog and order management through CRUD operations.
- Designed a scalable backend with Express.js and SQLite, applying modern development practices, version control with Git, and a responsive UI optimized for desktop and mobile devices.

Web Developer Intern Jul 2023 – Sept 2023
ELGI Equipments, Coimbatore, Tamil Nadu

- Developed Air Solve, a browser-based troubleshooting application using HTML, CSS, and JavaScript that enabled field engineers to independently diagnose air compressor faults.
- Designed a structured fault-diagnosis workflow covering products, symptoms, checkpoints, root causes, and recommended solutions.
- Built engineering calculators including pressure drop, ACFM, and energy-saving calculations to support faster field diagnostics.
- Replaced a mobile application-based support system with a browser-accessible solution, improving accessibility for field engineers and customers.

PROJECTS

NeuroNest Kids – Adaptive Learning Platform
Tech Stack: React.js, TypeScript, Express.js, PostgreSQL

- Designed and developed a full-stack adaptive learning platform using React.js, TypeScript, Express.js, and PostgreSQL.
- Built secure user authentication and REST API-based backend services for managing application data.
- Developed a parent analytics dashboard to monitor student learning progress.
- Configured Docker-based deployment with GitHub Actions CI/CD pipelines to automate application deployment.

Blood Donation System – Database Design Case Study (Team Project)
Tech Stack: Oracle SQL | ER Modeling | Normalization

- Designed and implemented a relational database architecture connecting blood donors, hospitals, and recipients.
- Applied ER modeling and database normalization (1NF–3NF) to improve data consistency and reduce redundancy.
- Developed DDL/DML operations and complex SQL queries using joins, subqueries, aggregate functions, and set operations to support donor-recipient matching.

EDUCATION

Master of Computer Applications (MCA) – Generative AI <i>SRM University, Chennai</i> Focused on Artificial Intelligence, Data Analytics, and modern computing technologies	<i>Aug 2025 – Jun 2027 (Expected)</i>
Bachelor’s Degree in Computer Science <i>PSGR Krishnammal College for Women, Coimbatore</i> Graduated with 87%, with a strong foundation in programming and problem-solving	<i>Aug 2022 – May 2025</i>
